WRG Certifications is a registrar of Quality and Environmental Management Systems to ISO 9000/ISO 14000 Series requirements. WRG provides independent

UL 94 is a safety standard to determine the flammability of plastic materials. This test is released by Underwriters Laboratories of the United States.

ASTM D570—Water absorption of plastics—describes various procedures that evaluate the amount of water that is absorbed by the sample. Moreover, it also permits to assess the uniformity of the imbibed specimen.

WPC FRAMES

101%

WATER & TERMITE PROOF
WPC DOOR FRAME

Frame your door with the authentic beauty and strength of WPC FRAME, the revolutionary door frame manufactured with "wood polymer composite" material.

WPC door frames are durable, low maintenance & ready to use. Unlike other wooden or other kind of door frame it is 101% water and termite proof panel and it is perfect choice for outdoor as well as indoor framing.

WPC FRAME designs blend beautifully with your home interior and exterior finishes. The exclusive innovations provide exceptional protection from drafts and leaks making your door stay looking new for years.

Nature Conscious

Product Features

RECYCLING

Our products are made of thermoplastics, which are fully recyclable. We use recycled materials in production. Depending on the product, the weight of recyclable materials is up to 80% of the total.

DURABILITY

Our products are extremely durable. The lifetime of many is 10 or even 30 years. Thanks to the resistance to a variety of external factors, their impact on the environment is significantly smaller than products with more frequent replacement causing additional wear raw materials, energy and waste generation.

MAINTENANCE

There is no need for maintenance over the entire lifetime, and therefore no additional chemicals (paints, preservatives, etc.) must be used, which means no harm to the environment.

INSULATION

Our claddings ensure proper ventilation of the facade and protect it against moisture. Additionally, they are an excellent cladding in the system of ventilated facades, which improves efficiency of heat of the building and reduces the need to burn fuels for heating purposes.

HEALTH

Our products are safe for health. They do not contain harmful substances (e.g. lead or cadmium) and do not release volatile organic compounds.

CARBON FOOTPRINT

Our materials contain mineral fillers and additives derived from renewable raw materials, which reduces the carbon footprint of up to 40% compared to products made only of synthetic polymers.

FEATURE	NORM	TEST RESULT	UNIT
